## Halcon 与.NET 混合编程

## 第一种方法(推荐)

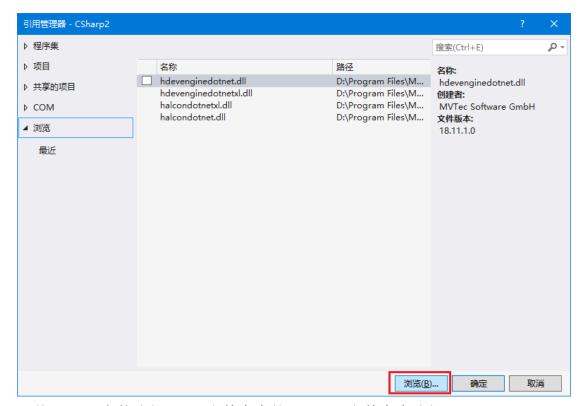

1、新建一个 C#的窗体应用,框架选择.NET Framework 3.5

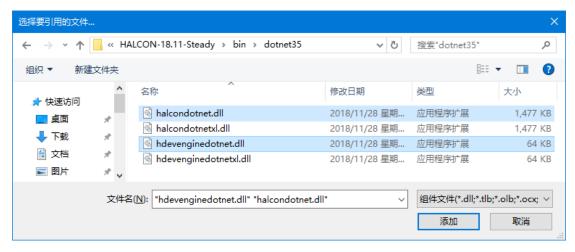

2、右键单击"引用", 然后点击"添加引用"

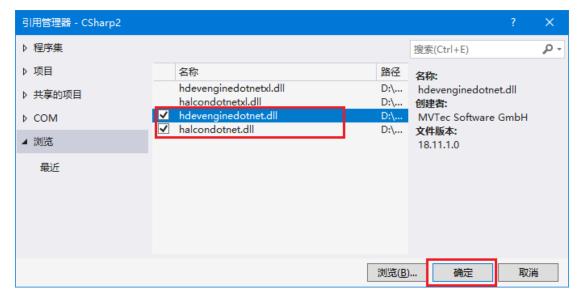

3、点击"浏览",找到要添加的引用所在的路径

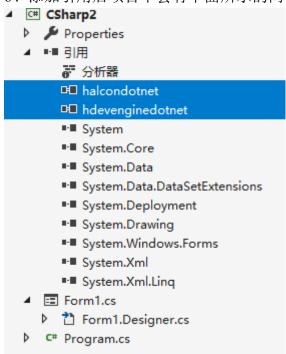

4、从 Halcon 安装路径下 bin 文件夹中的 dotnet35 文件夹中选择"halcondotnet.dll"和 "hdevenginedotnet.dll"两个文件,然后点击"添加"

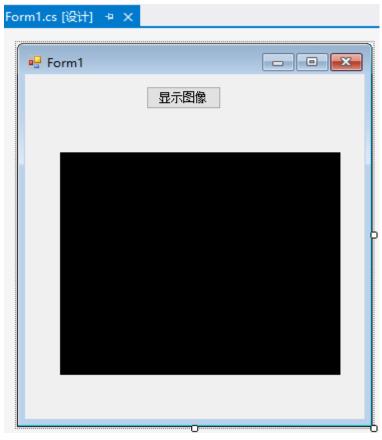

5、第4步中点击"添加"后界面如下所示,点击"确定"

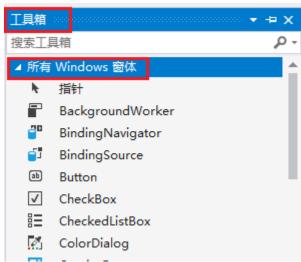

6、添加引用后项目中会有下面所示的两个引用

7、切换到 Form1.cs[设计]界面,点击 Form1 窗体后点击"工具箱"

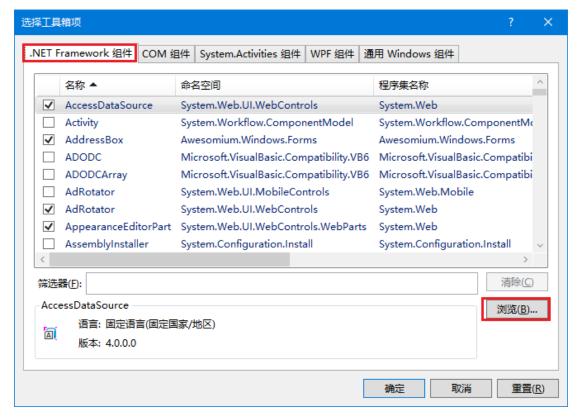

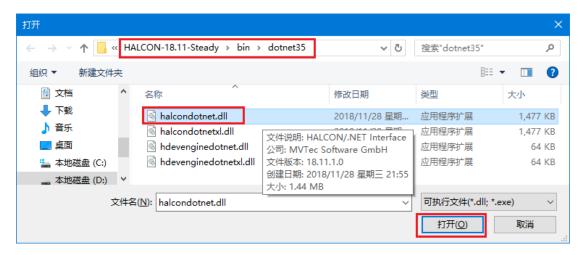

8、右键单击"所有 Windows 窗体", 然后点击"选择项(I)"

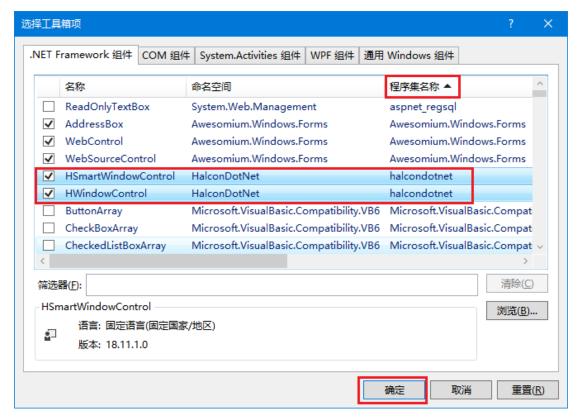

9、在弹出如下界面后,点击"浏览"

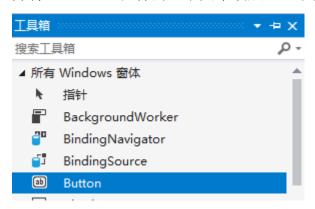

10、找到 Halcon 安装路径下 bin 文件夹中的 dotnet35 文件夹中的"halcondotnet.dll" 文件, 然后点击"打开"

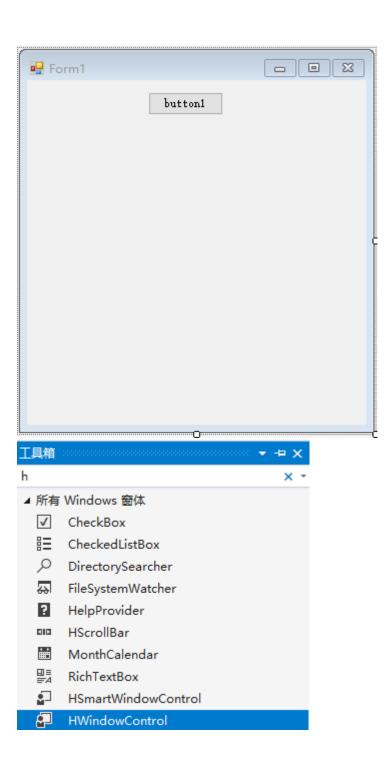

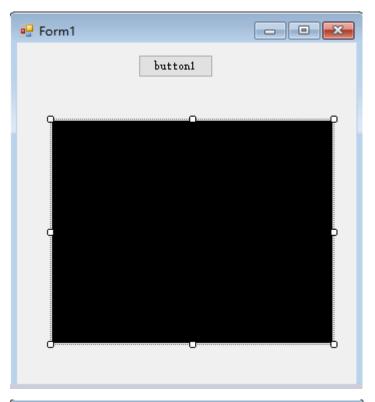

11、在下面的界面中可以看到添加的新的控件,然后点击"确定"

12、在 Form1 窗体中添加一个"Button"控件和一个"HWindowControl"控件, 并将"Button"控件的显示文本改成"显示图像"

13、在 Program.cs 文件中添加 using HalconDotNet;

14、在 Program.cs 文件中添加 Halcon 导出的 C#代码中的部分代码,如下图所示

```
Program.cs + X Form1.cs [设计]
C# CSharp2

    * CSharp2.Program

     11
                static class Program
     12
     13
                    /// <summary>
           Ė
     14
                    /// 应用程序的主入口点。
                     /// </summary>
     15
     16
                     [STAThread]
     17
                     static void Main()
          Ė
     18
     19
                         Application. EnableVisualStyles();
     20
                         Application. SetCompatibleTextRenderingDefault(false);
     21
                         Application. Run (new Form1());
     22
     23
                //第二步
     24
     25
                public partial class HDevelopExport
     26
                    public HTuple hv_ExpDefaultWinHandle;
     27
     28
     29
                    // Main procedure
     30
                    private void action()...
           +
    65
                    public void InitHalcon()...
    66
     72
     73
                    public void RunHalcon(HTuple Window)...
     78
```

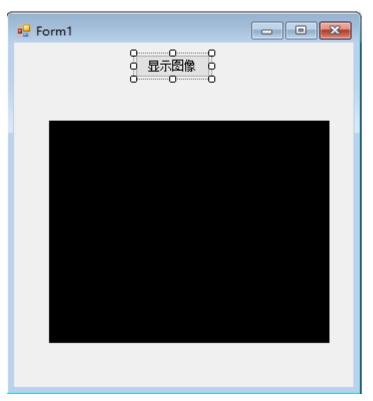

15、在 Halcon 导出的代码中添加一行代码 HTuple hv\_WindowHandle = new HTuple();, 否则会有一处错误,个人认为此为 Halcon 的 bug, 后续版本也许会修复

```
Program.cs 🗢 🗙
C# CSharp2
                                                             🐾 CSharp2.Program
      24
      25
                     //第二步
      26
                     public partial class HDevelopExport
      27
      28
                          public HTuple hv_ExpDefaultWinHandle;
      29
      30
                          // Main procedure
      31
                          private void action()
      32
                           {
      33
      34
      35
                               // Local iconic variables
      36
      37
                               HObject ho_Image;
      38
      39
                               // Local control variables
      40
      41
                               HTuple hv_Width = new HTuple(), hv_Height = new HTuple();
      42
                               //第三步
      43
      44
                               HTuple hv_WindowHandle = new HTuple();
Program.cs
- Q Main()

    CSharp2.Program

                       HTuple hv_WindowHandle = new HTuple();
                       // Initialize local and output iconic variables
    45
                          eratorSat CanEmntoOhi(out ho_Image);
    46
                  namespace CSharp2
public partial class HDevelopExport
    47
    48
                       HOperatorSet.ReadImage(out ho_Image, "D:/test DI/IMG_20180618_172946_HDR.jpg");
    49
    50
                       hv_Width.Dispose(); hv_Height.Dispose();
                       HOperatorSet.GetImageSize(ho_Image, out hv_Width, out hv_Height);
    51
                       //dev_open_window(...);
using (HDevDisposeHelper dh = new HDevDisposeHelper())
    52
    53
    54
                           HOperatorSet.SetPart(hv_ExpDefaultWinHandle, 0, 0, hv_Height - 1, hv_Width - 1);
    55
    56
                       HOperatorSet.DispObj(ho_Image, hv_ExpDefaultWinHandle);
    57
                       ho_Image. Dispose();
    58
    59
                       hv_Width.Dispose();
    60
                       hv_Height.Dispose();
//如果不添加第三步此处会导致报错
    -61
    62
                       hv_WindowHandle.Dispose():
    63
    64
    65
    66
                  public void InitHalcon()...
```

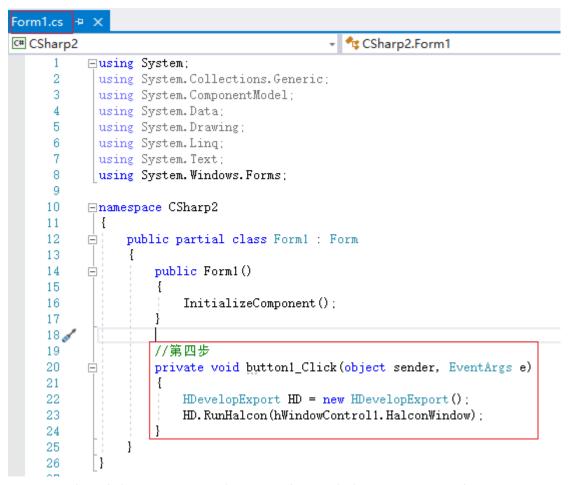

16、双击 Form1 中的"显示图像"

## 17、在button的Click事件中添加代码

HDevelopExport HD = new HDevelopExport();

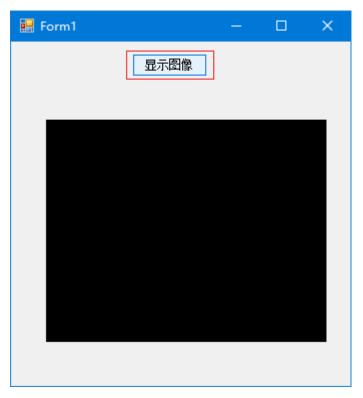

HD. RunHalcon (hWindowControll. HalconWindow);

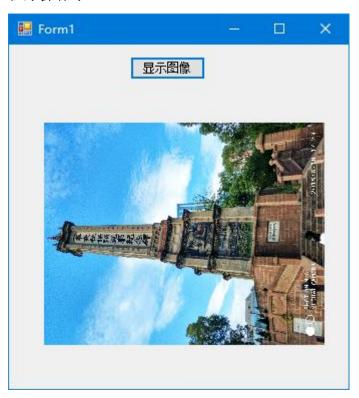

18、由于本人安装的 Halcon 只有 x64 版本,因此此处选择 x64 版本,如果是 x86 则选择 x86,如果两者都安装了则选择 Any CPU,然后点击"启动"

19、运行后界面如下图所示,点击"显示图像"

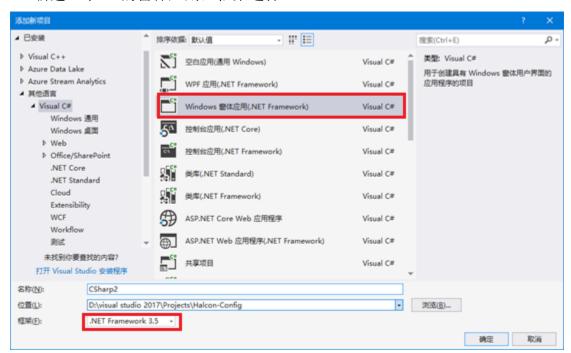

20、如果弹出下面的界面就说明 Halcon 与.NET 的配置成功了,可以进行复杂的程序操作了

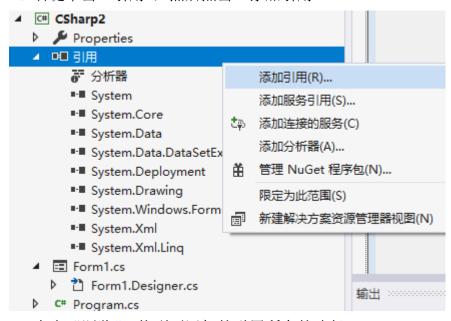

## 第二种方法(不推荐)

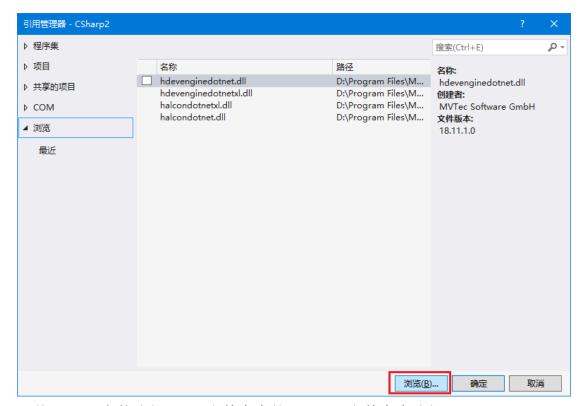

1、新建一个 C#的窗体应用,框架选择.NET Framework 3.5

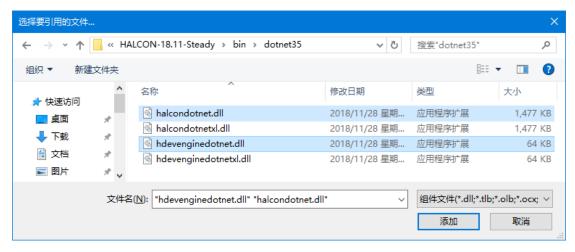

2、右键单击"引用", 然后点击"添加引用"

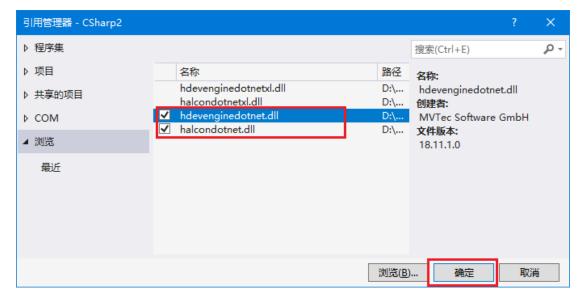

3、点击"浏览",找到要添加的引用所在的路径

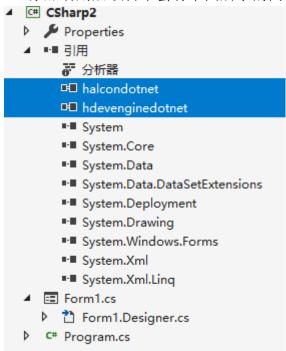

4、从 Halcon 安装路径下 bin 文件夹中的 dotnet35 文件夹中选择"halcondotnet.dll"和 "hdevenginedotnet.dll"两个文件,然后点击"添加"

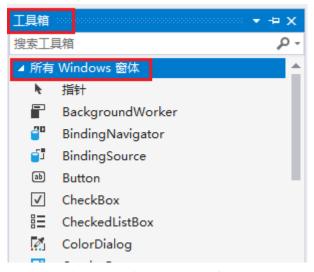

5、第4步中点击"添加"后界面如下所示,点击"确定"

6、添加引用后项目中会有下面所示的两个引用

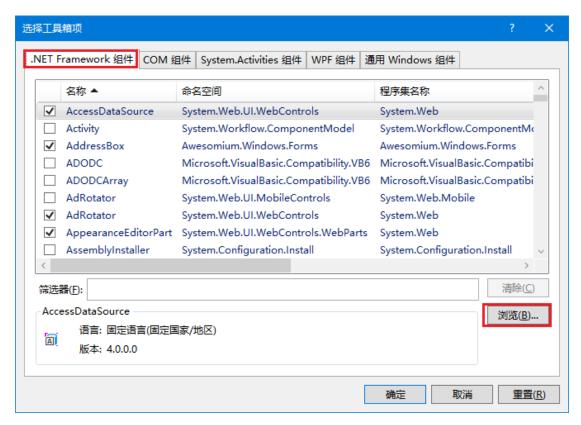

7、切换到 Form1.cs[设计]界面,点击 Form1 窗体后点击"工具箱"

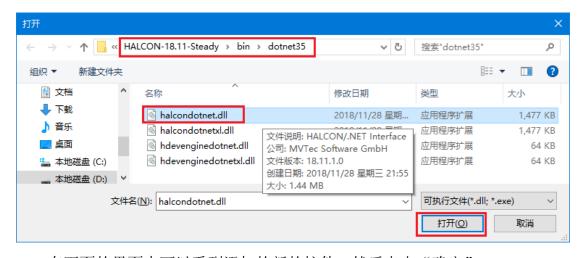

8、右键单击"所有 Windows 窗体", 然后点击"选择项(I)"

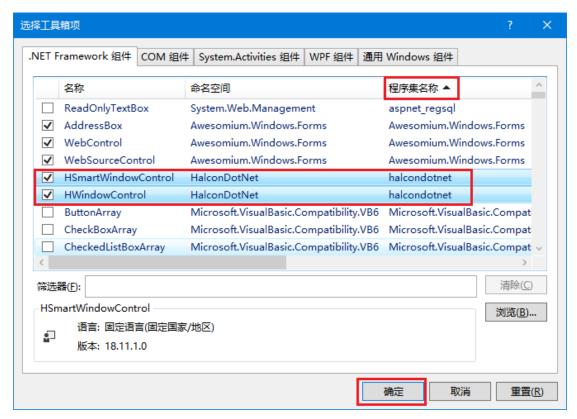

9、在弹出如下界面后,点击"浏览"

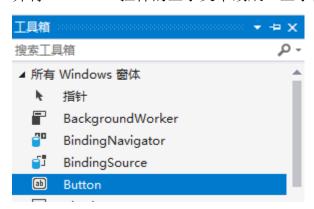

10、找到 Halcon 安装路径下 bin 文件夹中的 dotnet35 文件夹中的"halcondotnet.dll" 文件, 然后点击"打开"

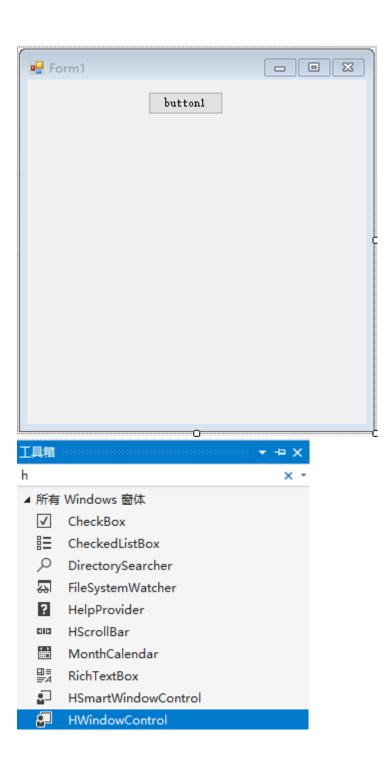

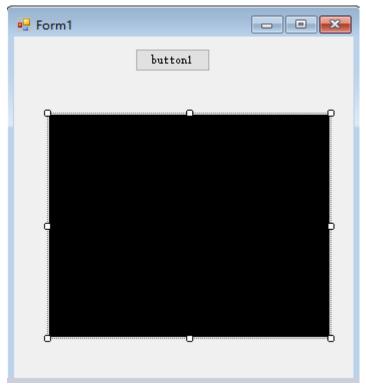

11、在下面的界面中可以看到添加的新的控件,然后点击"确定"

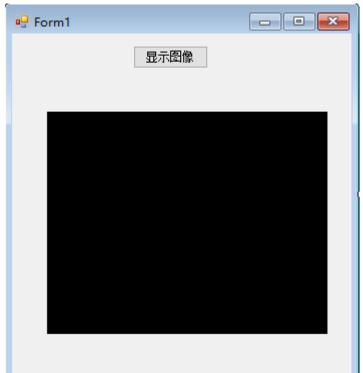

12、在 Form1 窗体中添加一个"Button"控件和一个"HWindowControl"控件,并将"Button"控件的显示文本改成"显示图像"

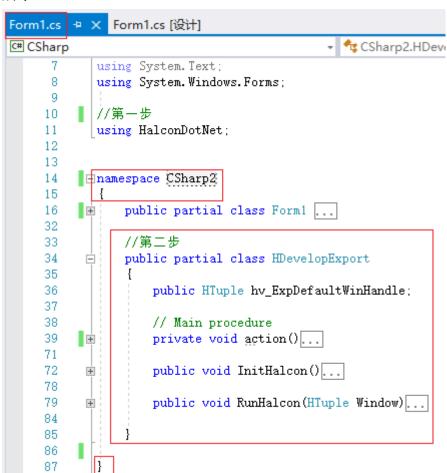

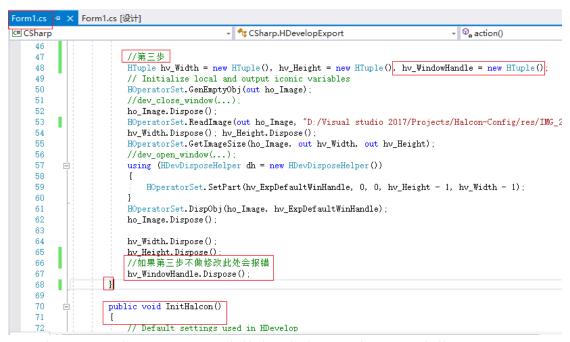

13、双击 Form1 的"显示图像",进入 Form1.cs,然后添加 using HalconDotNet;

```
Form1.cs 🗗 🗙 Form1.cs [设计]
C# CSharp
      1
           □using System;
      2
             using System. Collections. Generic;
      3
             using System.ComponentModel;
      4
             using System.Data;
      5
             using System. Drawing;
      6
             using System.Linq;
      7
             using System. Text;
      8
             using System. Windows. Forms;
      9
            //第一步
     10
             using HalconDotNet;
     11 🐨
     12
```

14、在 Form1.cs 中的 public partial class Form1 下面(此处是看到论坛中某网友说必须在此下面,否则会出错,未进行验证)添加 Halcon 导出的 C#代码,如下图所示

15、在 Halcon 导出的代码中添加代码 hv\_WindowHandle = new HTuple(), 否则会有一处错误,个人认为此为 Halcon 的 bug,后续版本也许会修复

16、在Form1.cs中button的Click事件中添加代码,此处Click事件由于上面第13 步的操作而产生

HDevelopExport HD = new HDevelopExport();

HD.RunHalcon(hWindowControll.HalconWindow);

```
Form1.cs + X
C# CSharp

    CSharp.Form1

     15
     16
                 public partial class Form1 : Form
           17
     18
                     public Form1()
     19
     20
                         InitializeComponent();
     21
     22 🖋
     23
                     //显示图片
     24
     25
                     private void button1_Click(object sender, EventArgs e)
           Ė
     26
                     {
                         //第四步
     27
     28
                         HDevelopExport HD = new HDevelopExport();
     29
                         HD. RunHalcon (hWindowControl1. HalconWindow);
     30
                     }
     31
```

17、由于本人安装的 Halcon 只有 x64 版本,因此此处选择 x64 版本,如果是 x86 则选择 x86,如果两者都安装了则选择 Any CPU,然后点击"启动"

18、运行后界面如下图所示,点击"显示图像"

19、如果弹出下面的界面就说明 Halcon 与.NET 的配置成功了,可以进行复杂的程序操作了
